FOREWORD

STUDENT AFFAIR DIRECTOR

UNIVERSITAS INDONESIA

Universitas Indonesia is considered as one of the most prestigious university not only in Indonesia but also in the world. Universitas Indonesia has a mission on becoming a **World Class University**. Based on that reason, Universitas Indonesia holds several activities that support their students on doing global actions such as international competitions and international conference. One of international conference that will be held by Universitas Indonesia in 2013 is **the 2013 Asia Pacific Student Forum** which managed by student-running organization namely **Universal Youth Alliance**.

The 2013 Asia Pacific Student Forum is an event that will gather students from all over the world especially Asia Pacific to discuss particular global issues. Hundreds of **youth from around the world** gather in Indonesia to discuss the global issues where the discussion is moderated by prominent specialist on its field. In addition of the open forum, prominent speakers are also invited to complete the forum's program, and the forum will result a recommendation that will be delivered to the related institutions. For this year, the topic that will be discussed is eradication of poverty and hunger which also stated as the first point of Millennium Development Goals.

Behalf on that, **I as Student Affairs Director of Universitas Indonesia gives full support** on holding this event. I believe by holding this international scale conference could become a precious opportunity to share ideas, exchange critics, and gather global point of views in order to support the process of development of this nation. To this end, Universitas Indonesia is **highly recommending you on supporting this event** so that this event could be conducted successfully.

UNIVERSITAS INDONESIA

Universitas Indonesia (UI) is a modern, comprehensive, open-minded, multi-culture, and humanism campus that covers wide arrays of scientific disciplines

UI simultaneously strives to be one of the leading research universities and the most outstanding academic institution in the world. As a **world class research university**, UI seeks to achieve the highest level of distinction in the discovery, developing and diffusion of advance knowledge regionally and globally. In the meanwhile, UI is distinctive among research universities in its commitment to the academic invention and research activities through various scientific programs.

UI was founded in 1849 and represents the most experiencing educational institution in Asia. Additionally, Christiaan Eijkman (The Director of Javaneese Medical Doctor School-the earlier form of universitas indonesia) was awarded the Noble Prize in Physiology or Medicine in 1929. He was the first to point out a substance in the rice skin and later was to be known as vitamin B1. he was also awarded the Prize for his new of investigating and his method to control diseases caused by vitamin deficiency.

Recently, UI produces more than **400.000 alumni** and continues its important role both nationally and internationally. Furthermore, it is our commitment to produce high quality of education system, global standard research activities and maintaining high standard of international academic research publications.

Being one of the top best universities in the world, UI is actively expanding **international cooperation** with other world class universities. Vivacious cooperation had been developed in the domain of education and joint-research with the finest universities. UI builds strong cooperation with top universities such as Washington University, Tokyo University, Melbourne University, Sydney University, Leiden University, Erasmus University, Kyoto University, Peking University, Tsinghua University, Australian National University, and National University of Singapore.

However, UI is actively contributes to strengthen and enlarge international network by actively participating to both regional as well as international education and research association. UI plays an active role on 7 higher learning associations in Asia Pacific, Europe, Southeast Asia, and worldwide associations such as APRU (Association of Pacific Rim Universities), AUN (ASEAN University Network), and ASAIHL (Association of South East Asia Institution of Higher Learning). The first association, UI becomes one of the board of Director of the Association of Pacific Rim Universities (APRU)

WHY POVERTY?

We believe that poverty is closely related to economic growth of a country. When graduate student of economic in Universitas Indonesia is asked about what are issues that related to poverty they answered crime, illness, sanitation, hunger, unemployment, uneducated people, poor agriculture, corruption, but none of them answer economic growth. Because our sense always relate poverty to injustice, human rights, inequality, or immorality. But if we take a look more closely to the issues mentioned, we will see that poverty is actually related to the economic growth of a country.

We simplify all issues that have been mentioned earlier into four specific problems that could lead us into innovation. First is health or nutrition problem, second is education problem, third is source of financial inclusiveness, and the last but not the least is social entrepreneurship.

HEALTH

Basic health needs must be addressed first and foremost because sick people cannot work; and parents with sick children have to worry about their children's well-being. Having good health allows people to progress to livelihood development schemes. Once the people are in good health and able to work, they could become a fully function member of society and of course they increase their quality. With a high quality of human resource, higher economic growth could be achieved.

INNOVATION: Raskin (Grant based - Indonesia), Lucky Fish (Cambodia)

EDUCATION

When each family can earn sufficient income since they are healthier, education becomes the main focus as the key to unlocking opportunities for the next generations. Education includes both formal education in school and vocational trainings to prepare the locals to be committed, resourceful leaders. Formal education fosters both academic excellence and extra-curricular activities to increase the schoolchildren's confidence and creativity. There are also informal education schemes which encourage learning by doing, and provide on-the-job skills training in areas like farming and husbandry. Once again better education could lead to better quality of human resource and once again it could support the economic growth.

INNOVATION: Free Education, Poor Scholarship (Grant based - Indonesia)

Small Step from The Youth, a Giant Leap for a World without Poverty

FINANCIAL INCLUSIVENESS

Source of financial is another issue that should be addressed seriously, because some people do not have the opportunity as others in terms of financial source. Let's take a look at the agricultural credit availability, or we could say unavailability. Agriculture is closely related to weather and climate, and weather and climate cycle is two of things that have a high degree in terms of predictability, and farmer has to suffer with that matter. In addition financial and banking system do not support farmer in facing its problem, because Bank is for profit organization, and by that of course banks prefer sectors that has a high profitability and unfortunately agriculture is not included on the group. Unless there is no innovation that could help farmer; it could become an intergenerational poverty. And intergenerational poverty could create uneducated and bad health condition people, which of course lead to lower human resource quality, and at the end lower economic growth.

INNOVATION: Grameen Bank (Bangladesh)

SOCIAL ENTREPRENEURSHIP

The common business that operated today is profit oriented, because for some people profit or money is the reason why they started business in the first place. But actually it does not necessarily true, because other people value human rights or compassion over money, and they call it social entrepreneurship. The social entrepreneurship is intended to solve social problem, it includes poverty. There is so many way to conduct social entrepreneurship, creativity is one of the most important catalyst that help entrepreneurs solve social problem, The more social entrepreneurship, the less poverty, and the better a country will be.

CONCEPT & OUTPUT

The concept of The 2013 Asia Pacific Student Forum is Action Based Forum where we are not only discussing about problem, but we are also discussing about the solution and conduct action based on the solution.

We started the forum with sharing and brainstorming session, where we share our own idea regarding the poverty problem and its possible solution. We believe the diversity of the participant in the forum could generate ideas or insight that inspires the entire participant to think differently and much more creatively.

The sharing and brainstorming session is followed by a discussion of project that is feasible enough to be implemented by the delegates in their home country. We call the proposal "ARC" which stands for an Act of a Random Action, because we believe that small action is better than no action at all, and every small step to eliminate poverty is a giant leap for mankind.

And we will disseminate all of the idea generated through many channel of communication. As the APEC forum is going to be held two days after the 2013 ASPF, we will try making youth from all over the world inspired by the project proposal generated; and at the end, agent of change will be born.
